Contents of Volume 43

NUMBER 1, MARCH 1975

Full Papers

DIANNE FRISTROM AND JAMES W. FRISTROM. The Mechanism of Evagination of Imaginal Discs of <i>Drosophila melanogaster</i> . I. General Considerations.....	1
JOHN F. FALLON AND GAYLE M. CROSBY. The Relationship of the Zone of Polarizing Activity to Supernumerary Limb Formation (Twinning) in the Chick Wing Bud.....	24
S. K. DUTTA AND R. K. CHAUDHURI. Differential Transcription of Nonrepeated DNA during Development of <i>Neurospora crassa</i>	35
YUTAKA SHIMADA AND DONALD A. FISCHMAN. Scanning Electron Microscopy of Nerve-Muscle Contacts in Embryonic Cell Culture.....	42
VICTOR D. VACQUIER. The Isolation of Intact Cortical Granules from Sea Urchin Eggs: Calcium Ions Trigger Granule Discharge.....	62
DANIEL LEVITT, PEI-LEE HO, AND ALBERT DORFMAN. Effect of 5-Bromodeoxyuridine on Ultrastructure of Developing Limb-Bud Cells <i>in Vitro</i>	75
LEONARD M. MILSTONE AND JORAM PIATIGORSKY. Rates of Protein Synthesis in Explanted Embryonic Chick Lens Epithelia: Differential Stimulation of δ -Crystallin Synthesis.....	91
ARON E. SZULMAN. Experimental <i>in Vitro</i> Organogenesis and its Modification by Antibody Directed to a Cell Surface Antigen.....	101
DAVID R. MCCLAY AND SUSAN R. BAKER. A Kinetic Study of Embryonic Cell Adhesion.....	109
MICHAEL D. COUGHLIN. Early Development of Parasympathetic Nerves in the Mouse Submandibular Gland.....	123
MICHAEL D. COUGHLIN. Target Organ Stimulation of Parasympathetic Nerve Growth in the Developing Mouse Submandibular Gland.....	140
ROBERT M. BENBOW, RICHARD Q. W. PESTELL, AND CHRISTOPHER C. FORD. Appearance of DNA Polymerase Activities during Early Development of <i>Xenopus laevis</i>	159
C. C. FORD, R. Q. W. PESTELL, AND R. M. BENBOW. Template Preferences of DNA Polymerase and Nuclease Activities Appearing during Early Development of <i>Xenopus laevis</i>	175
C. C. FORD AND H. R. WOODLAND. DNA Synthesis in Oocytes and Eggs of <i>Xenopus laevis</i> Injected with DNA.....	189

Brief Notes

JAN ČEJKA, WARD D. PETERSON, JR., JOHN BELAMARIC, AND KAREL KITHIER. <i>In Vitro</i> Synthesis of β_2 -Microglobulin by Human Fetal Tissues.....	200
KI M. MARK, AND JERRY S. TRIER. Lipoprotein Particles in the Jejunal Mucosa of Fetal Rats.....	204

Features

News, Opinion and Letters.....	f-1
Current Literature.....	f-3
Editor's Index.....	f-18

NUMBER 2, APRIL 1975

Full Papers

TILMANN WURTZ AND HARALD JOCKUSCH. Sexual Differentiation in <i>Mucor</i> : Tri-spore Acid Response Mutants and Mutants Blocked in Zygosporangium Development..	213
---	-----

GERALD N. SMITH, JR., BRYAN P. TOOLE, AND JEROME GROSS. Hyaluronidase Activity and Glycosaminoglycan Synthesis in the Amputated Newt Limb: Comparison of Denervated Nonregenerating Limbs with Regenerates.....	21
EILEEN MASTERSON, HENRY F. EDELHAUSER, AND DIANE L. VAN HORN. Development of Corneal Transparency in Embryonic Chick: Influence of Exogenous Thyroxine and Thiouracil on Structure, Water and Electrolyte Content.....	22
PAUL N. ADLER AND CHARLES E. HOLT. Mating Type and the Differentiated State in <i>Physarum polycephalum</i>	24
FRANCO GABRIELLI AND CORRADO BAGLIONI. Maternal Messenger RNA and Histone Synthesis in Embryos of the Surf Clam <i>Spisula solidissima</i>	25
LUTZ WIESE AND WALTRAUD WIESE. On Sexual Agglutination and Mating Type Substances in Isogamous Dioecious Chlamydomonads. IV. Unilateral Inactivation of the Sex Contact Capacity in Compatible and Incompatible Taxa by α -Mannosidase and Snake Venom Protease.....	26
THOMAS B. RICE AND ALAN GAREN. Localized Defects of Blastoderm Formation in Maternal Effect Mutants of <i>Drosophila</i>	27
MARY ALICE YUND AND JAMES W. FRISTROM. Uptake and Binding of β -ecdysone in Imaginal Discs of <i>Drosophila melanogaster</i>	28
MILES PAUL. Release of Acid and Changes in Light-Scattering Properties following Fertilization of <i>Urechis caupo</i> Eggs.....	29
MASAMICHI YAMAMOTO AND KENJIRO YAMAGAMI. Electron Microscopic Studies on Choriolysis by the Hatching Enzyme of the Teleost, <i>Oryzias latipes</i>	31
MASARU NONAKA AND HIROSHI TERAYAMA. Thymidine Kinase Activation in Unfertilized Sea Urchin Eggs by Homogenization and Fertilization.....	32
 <i>Brief Notes</i>	
NIRMAL K. DAS, JULIE MICOU-EASTWOOD, AND MAX ALFERT. Cytochemical Studies on the Protamine-Type Protein Transition in Sperm Nuclei after Fertilization and the Early Embryonic Histones of <i>Urechis caupo</i>	33
BEVERLY M. ASH AND RAYMOND E. STEPHENS. Ciliogenesis during the Sequential Formation of Molluscan Gill Filaments.....	34
<i>Erratum</i>	34
Author Index.....	34
Subject Index for Volume 43 will appear in the December 1975 issue as part of a cumulative index for the year 1975	
 <i>Features</i>	
Current Literature.....	f-2
Editor's Index.....	f-3

Information for Authors

Developmental Biology will publish in English original papers and review articles bearing on problems of development in the broadest sense; it will contain papers dealing with embryonic and postembryonic development, growth, regeneration, and tissue repair both in plants and animals. Papers dealing with reproductive biology and biology of aging that deal fundamental mechanisms of general interest will also be published. The journal serves as a meeting ground for studies on development that employ techniques from a wide range of disciplines, e.g., biochemistry, biophysics, cytology, experimental morphogenesis, teratology, genetics, immunology, microbiology, pathology, pharmacology and physiology. The journal aims for rapid publication; currently, publication time is 4-5 months from date of acceptance.

Articles usually do not exceed 15,000 words and must be accompanied by an abstract that gives, in 200 words or less, a synopsis of the work, including methods and results. **Brief notes** are 2500 words or less including the bibliography, which should contain only references unless the abbreviated reference format is used (see directions under references). The conventional format is: abstract, introduction, methods and materials, results, and discussion, but authors are encouraged to present their material in the most logical and appropriate form.

Figures should be numbered consecutively in the order of their appearance and each should have a descriptive legend. Mark all figures with the author's name and address.

Line drawings should be made with India ink on smooth white paper. Do not submit original line drawings larger in size than $13 \times 10''$; instead enclose smaller high quality prints for the printer and for editorial use (two copies). Be sure lettering is uniform and large enough to allow for reduction and that the drawings when reduced will be either column ($2\frac{5}{8}''$) or page ($5\frac{1}{2}''$) width. A figure that is submitted $5\frac{1}{4}''$ wide with lettering 3 mm high when reduced 50% will be a single column width. A figure submitted $11''$ wide with lettering 3 mm high when reduced 50% will be full page width.

Photographs submitted for publication must be the actual size for reproduction and carefully labeled with letters 2-4 mm high. The page size of the journal must be considered and the following format observed.

- (1) Column width figures are to be no wider than $2\frac{5}{8}''$ or longer than $8''$.
- (2) Page size figures should be $5\frac{1}{2}''$ wide and no longer than $8''$.
- (3) If the author decides to bleed the page (no margins), figure numbers should be no closer than $\frac{3}{4}''$ to the margin to allow for trimming during binding of the journal. Figures to be bled must be $6\frac{7}{8} \times 10''$ (submitted at $7 \times 10\frac{1}{4}''$ to allow trimming).

Use unmounted figures where possible, but when several appear together as one plate, mount them on cardboard or paper as close together as possible. The engraver will tool thin white lines between figures. Give magnification in the legend or indicate with a μ marker on the photograph. Two pages of half-tone figures per article and ten pages of half-tone figures per review article will be published without cost to the author; a charge of \$50 per page will be required for pages in excess of this number. The author will defray the expense of colored plates.

Tables should be used to condense data referred to in the text. They should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text, and collected at the end of the manuscript. Give each table a concise, descriptive heading. Tables should be so composed that the content can be grasped without reference to the text.

References to the literature may be cited in one of the following forms: Doe (1965) has observed that . . . ; (Doe, 1955; Doe *et al.*, 1960); Doe 1961, p. 250). Use suffixes a, b, etc. following the date to distinguish two or more works by the same author(s) in the same year (Doe, 1960a, b). Alternatively, references may be referred to by number: Doe (1) has observed that . . . (see also 5, 10, 16). Arrange literature citations in the bibliography alphabetically according to the surname of the author, using the following order of items: author(s), date of publication, title of article or book, journal name, volume number, inclusive pages, publisher and city (for books only). Abbreviate titles of journals in accord with Chemical Abstracts' Service Source Index. Number the references only if they are referred to by number in the text. For a brief note with more than twelve references, references in the text must be cited by number and titles omitted in the bibliography section. The same short form may be used with a full paper when an excessive number of references are quoted.

Galley proof should be read carefully as no page proof will be sent to authors. Be certain figures are the correct size and correctly reproduced either as halftones or line drawings and avoid excessive text changes that involve resetting. Reprints may be ordered when galley proof is returned. Fifty reprints are supplied gratis.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. They must be typewritten, double-spaced, on one side of white bond paper about $8\frac{1}{2} \times 11$ " in size, with the pages numbered consecutively. Indicate the address for galley proof. Include with full length articles a running headline not exceeding 35 letters and spaces. Use footnotes sparingly, if at all. Cite them, using superscript numbers, in consecutive order in the text and type them consecutively on a separate sheet. Acknowledgments and figure legends should also be typed, double-spaced, as separate sections. Two copies of the manuscript (original and carbon) and two copies of the figures should be mailed to Dr. Elizabeth D. Hay, Department of Anatomy, Harvard Medical School, Boston, Massachusetts 02115.
